

World's Fastest in China's Tallest... At the Heart of Shanghai, Mitsubishi Electric Elevators

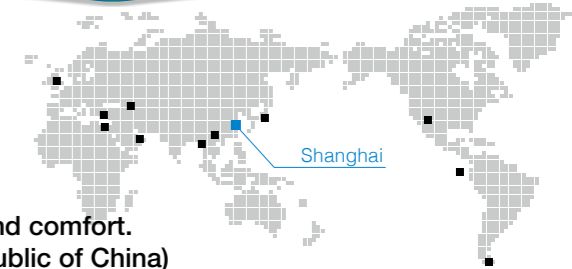

*According to Mitsubishi Electric research as of November 1, 2016

Exploring Mitsubishi Elevators & Escalators Around the World

Vol. 12

World's fastest elevator
in Shanghai Tower.
The ultimate in silence and comfort.
(Shanghai, People's Republic of China)

Once known as the Paris of the East in the early 20th century, today Shanghai remains an exotic magnet for culture and the arts but has grown into a global hub for business and finance. Spiraling to a height of

632 meters against the dynamic skyline, the futuristic Shanghai Tower is the city's newest architectural icon. It boasts a total of 114 elevators, all supplied by Mitsubishi Electric. Three ultra-high-speed elevators serve the Observation Deck (119 floors above the ground), one of them the fastest passenger elevator in the world with a record-breaking speed of 1,230m/min. Conventionally the faster the elevator, the greater the noise and vibration, but Mitsubishi Electric has solved this problem with "active roller guide" and noise reduction technologies. The result is a huge increase in speed and silent top-level riding comfort. The regenerative power produced during operation contributes to energy savings.

Today, the world's fastest elevator from Mitsubishi Electric is carrying people to the top of China's tallest building to enjoy the grand panoramic view of Shanghai.
